

You will want to have on hand:

- Bow Jig and Tool
- Davis Ribbon
- Davis Latex Bands
- Davis Shears (to cut the ribbon)

OPTIONAL:

- Davis Hemostat (to place the bow on the pet)
- Decorative Pom Poms, Beads, Rhinestones and a Glue Gun or Super Glue

An option is to use the sides of the Bow Jig base to measure out the length for your ribbon. Adjusting the position of the pegs will increase or decrease the size of the bow. With the pegs in the position as shown to the left, the finished bow will be approximately 3" wide.

Insert the ribbon into one of the Bow Jig clips. We at Davis like to start from the right side making our way around.

Once you've clipped in one end of the ribbon, guide the ribbon around the front.

Continuing around the back

Making your way around to the front

Once you're all the way around to the front, clip the tail end into the other clip.

Notice the starting position of the tool and latex band. The latex band is to be held from the front of the bow.

Loop the latex band over tool & stretch band under the bow.

Press down on the latex band with your thumb to hold it in place. Then, bring tool up and over. Loop the latex band onto hook at the top of the tool.

Once latex band is fully looped, pull upward, stretching band.

Maneuver tool into the position to the left (NOTE: the Bow Jig tool tip/hook portion of the tool is facing up/out)

IMPORTANT: Turn the Bow Jig tool, ensuring the smooth side is facing up. This will prevent the latex band from catching on the tool hook.

Pull steadily on the latex band, cinching down on the center of the bow.

Viola!
